

[4:53:29 PM] *** European Weekend Testers added Alex Rotaru ***

[4:53:49 PM] *** European Weekend Testers added Amy B ***

[4:54:34 PM] European Weekend Testers: Hello All

[4:54:51 PM] European Weekend Testers: can you see what I am typing here?

[4:54:55 PM] Amy B: yes

[4:55:31 PM] *** European Weekend Testers added Aine McGovern ***

[4:55:40 PM] Alex Rotaru: yes

[4:55:41 PM] Alex Rotaru: hi

[4:55:58 PM] Amy B: Hi Alex

[4:56:07 PM] Alex Rotaru: Hi Amy

[4:58:25 PM] European Weekend Testers: still waiting for some people ...

[4:58:40 PM] European Weekend Testers: I see some requested to be added, but are not available...

[4:58:42 PM] Amy B: OK

[4:59:57 PM] Amy B: Alex, how long does the event last?

[5:00:31 PM] Alex Rotaru: I think it should take around 2 hours. but I'm not sure, as this is my first attendance :)

[5:00:44 PM] European Weekend Testers: Yes it should take 2 h

[5:02:19 PM] Amy B: OK, good to know

[5:02:46 PM] European Weekend Testers: Looks like very few are available today for a session

[5:07:37 PM] *** European Weekend Testers added eusebiu blindu ***

[5:08:04 PM] eusebiu blindu: Hi All

[5:08:45 PM] Amy B: Hi Eusebiu

[5:08:58 PM] European Weekend Testers: Ok guys...

[5:09:08 PM] European Weekend Testers: How about we start

[5:09:35 PM] European Weekend Testers: and if someone joins on the way we can add later

[5:09:52 PM] European Weekend Testers: We usually start with presentations

[5:10:27 PM] European Weekend Testers: So if you want to give a short description about yourselves it will be great :)

[5:11:16 PM] eusebiu blindu: I am Eusebiu Blindu (Sebi) tester since 2005, I blog at <http://www.testalways.com> and tweet at @testalways

[5:11:31 PM] Alex Rotaru: I'm Alex, I've been working as a software tester for more than 5 years now. I'm currently located in Helsinki for a project.

[5:11:51 PM] Amy B: I'm Amy B. I've been in software testing now for 5+ years, testing everything from mainframe to Web-based apps. I'm starting my first Agile project now, which is both exciting and confusing.

[5:14:00 PM] European Weekend Testers: About the proposed mission maybe I should add a few words in advance so it will not look outrageous or something like that. As testers we have the tendency to just test right away when we get a project and not inquiry enough about it. So in that way we may consume time on impossible projects or not inform about the needs in order to be succesfully delivered on time

[5:14:26 PM] European Weekend Testers: ((*)) The mission is to evaluate <http://freeradius.org/download.html> and state if a proper testing can be done for it in the next month

Participants should list what are the needs to test this, if possible, and if we should hire another person in testing department more familiar with this.

Participants are encouraged to design a low tech testing dashboard for testing that particular application.

Example <http://www.satisfice.com/presentations/dashboard.pdf>

((*))

[5:15:42 PM] European Weekend Testers: As you can see the product will require knowledge that normally a tester who didn't work in a certain area will unlikely have

[5:18:12 PM] European Weekend Testers: Radius protocol to get u started is used in telecom and to put it simple: it authenticates a new device on the network. So customer buys a smartphone, inserts SIM or whatever does to get it started and the device will be recognised by this protocol

[5:19:20 PM] European Weekend Testers: but anyway the idea is that we can think of it as a meeting in which we decide if this is testable by our current stuff (assuming we will use this product in our services) or we need to hire someone new

[5:19:55 PM] European Weekend Testers: Any comments? :)

[5:21:33 PM] European Weekend Testers: Imagine that you are in a startup company

[5:21:43 PM] European Weekend Testers: and things are not set togheter

[5:21:46 PM] European Weekend Testers: yet

[5:21:59 PM] European Weekend Testers: you are payed above the market

[5:22:07 PM] European Weekend Testers: you can reccomend your friends

[5:22:14 PM] European Weekend Testers: getting bonuses

[5:22:18 PM] European Weekend Testers: I don't know

[5:22:41 PM] European Weekend Testers: you get something you might feel its very hard

[5:22:46 PM] European Weekend Testers: but what do you do

[5:23:40 PM] Amy B: I guess I would assess what should be tested (in consultation with potential users, sales, whoever has business insight), figure out if I could do any portion of it, and farm out what I'm not so great at doing

[5:24:05 PM] European Weekend Testers: Let's give an estimate like 1 month

[5:25:08 PM] European Weekend Testers: "We need to integrate the radius server into our system and check if its works - 1 month- then we ship to our customers-btw our customers are very demanding"

[5:26:45 PM] Amy B: I feel like I need more info. What does our startup do? Do we host the Radius servers? Or are we testing servers for shipment to telecom customers? Who are our customers?

[5:27:58 PM] European Weekend Testers: We are providing solutions for telecom companies and this product is used to filter SMS messages

[5:29:18 PM] European Weekend Testers: We develop the filter but we use this 3rdparty Radius Server (actually we did an evaluation, we are not using yet) -but we need to test it right away

[5:32:05 PM] *** European Weekend Testers added tonybruceuk ***

[5:32:56 PM] tonybruceuk: Good afternoon

[5:33:00 PM] European Weekend Testers: Hi Tony

[5:33:24 PM] European Weekend Testers: We have a mission today that is a little bit different

[5:33:39 PM] European Weekend Testers: And focuses on choices in a beginning of a project

[5:36:58 PM] European Weekend Testers: Ok guys...how this is working for you so far?

[5:38:59 PM] Amy B: I guess I don't really understand what I'm supposed to be working on. If I had to test this myself and had the choice of hiring someone else to test it, I would hire someone else since I'm not familiar at all with the technology in question. I'm not sure what else I would need to work out.

[5:39:10 PM] *** European Weekend Testers added Michael Bolton ***

[5:39:56 PM] European Weekend Testers: but what would be the first questions or first thing that you do when encountering something like that?

[5:40:30 PM] eusebiu blindu: I need to say that I've encountered that quite often

[5:40:38 PM] European Weekend Testers: Hi Michael

[5:41:19 PM] Amy B: The first thing I did when you sent out the links was to scan the Wiki and see what claims were made about the product.

[5:41:37 PM] European Weekend Testers: Ok so documentation then?

[5:42:30 PM] Amy B: Yes - to see if (1) I could find anything out about the problem the product is intended to solve. If I understood that, then I could start looking at the claims that were made about the product.

[5:42:37 PM] Michael Bolton: "but what would be the first questions or first thing that you do when encountering something like that?" The first question I need to ask here is "Who is my client?"

[5:43:46 PM] European Weekend Testers: The client (as defined by now) is a startup company providing a small filtering solution for Telecom companies

[5:43:52 PM] Michael Bolton: That is not my client.

[5:44:10 PM] Michael Bolton: I need a /person/ to whom I am responsible.

[5:44:22 PM] Michael Bolton: I need a person to whom I can ask questions.

[5:44:28 PM] Michael Bolton: Otherwise, all this is speculation.

[5:44:58 PM] European Weekend Testers: Let's say I am new Manager and we have a dev team but I don't know too much about testing or what we need there

[5:44:59 PM] tonybruceuk: What's 'proper testing' ?

[5:45:11 PM] Michael Bolton: Are you my client?

[5:45:23 PM] tonybruceuk: And if there is a option to hire somebody else to join the team then hell yeah, bring em on.

[5:45:54 PM] European Weekend Testers: I am new Manager let's say in the same organisation as the participants here

[5:45:57 PM] Michael Bolton: Okay.

[5:46:04 PM] Michael Bolton: Is it all right if I ask you questions?

[5:46:16 PM] *** European Weekend Testers added Ben Simo ***

[5:46:28 PM] European Weekend Testers: Hi Ben

[5:47:04 PM] European Weekend Testers: yes

[5:47:11 PM] Michael Bolton: Okay.

[5:47:33 PM] Michael Bolton: My first question, given the mission, is "Is it okay if we dispense

with the dashboard issue, for a moment?"

[5:47:47 PM] Ben Simo: Greetings

[5:47:48 PM] European Weekend Testers: yes no problem, it was a suggestion anyway

[5:47:55 PM] Michael Bolton: Good.

[5:49:11 PM] Michael Bolton: Next question: "You've asked me if it's possible to test this in a month. What if I said No?"

[5:50:00 PM] European Weekend Testers: well then we need to hire a more "technical" QA (used term on purpose but is a tester)

[5:50:44 PM] Ben Simo: what is "this"? (Sorry, i'm late to this party)

[5:51:03 PM] European Weekend Testers: *with the mention that this will be not pleasant to new manager, anyway not very familiar with testing*

[5:51:03 PM] Ben Simo: nevermind. i got info

[5:52:27 PM] European Weekend Testers: There is no structure in the testing team at this moment, but we will need to analyse and maybe hire a new tester more suitable. So it will mean current testers will lose a little credibility

[5:53:36 PM] European Weekend Testers: We also think in promoting Leroy from technical support to testing, as he is more familiar with many protocol knowledge and company

[5:54:06 PM] Ben Simo: how is this server to be used? by whom? for what?

[5:54:38 PM] Michael Bolton: Oh. You're thinking of firing me based on one possible answer. Cool. Either I'm going to have to renegotiate our relationship right away, OR I'll be glad to leave.

[5:54:54 PM] Ben Simo: what would be the potential cost if the software completely failed?

[5:54:55 PM] European Weekend Testers: Its used as a 3rd party application for our own product and we need to include right away (3 days) and test for a month (if I have the right testing resources)

[5:56:02 PM] European Weekend Testers: I am new manager here and want to please everyone older than me, but I need to know if we hire maybe someone with no experience with testing, but more protocol familiar in this case

[5:56:33 PM] Amy B: more technical expertise != faster testing

[5:56:45 PM] Ben Simo: are you wanting to use FreeRADIUS to host an existing product? or is this a new product? Who will be installing and managing FreeRADIUS? Customer or development company?

[5:57:18 PM] Michael Bolton: Let me clarify my question, then. The mission, as I understood it, was to answer the question, "Can this be tested in one month?" My answer would be "Yes, anything can be tested in any amount of time you're willing to provide." But I'm curious as to what you think "tested" means, and my question was a way of testing that. I now believe that you might be asking, "Can this application be released, /to your satisfaction/, in one month?" Is that what you're asking?

[5:57:38 PM] European Weekend Testers: We need to use the radius server to authenticate new devices on the network, and use that info into our own product.

[5:57:46 PM] European Weekend Testers: we cannot do it without it

[5:57:47 PM] Amy B: you would have less of a learning curve on the technical aspects but I don't think you can teach someone to be a good tester in < a month

[5:58:02 PM] European Weekend Testers: otherwise we need to implement our own-no

resources for that

[5:58:24 PM] tonybruceuk: We're testing somebody else's software? Can we get issues fixed directly or do we need to log a support call?

[5:58:33 PM] tonybruceuk: If you can't do without it just stick it in.

[5:58:41 PM] European Weekend Testers: @Michael. Yes "Can this application be released, /to your satisfaction/, in one month?" Is that what you're asking?

[5:59:39 PM] European Weekend Testers: @Tony we need to integrate with our product

[6:00:38 PM] European Weekend Testers: @Amy so then what is your suggestion? We can hire now a guy and we think we might keep him after the 6 months initial contract

[6:00:40 PM] Michael Bolton: Oh. Okay. I'd like to make it clear, then: I can provide you with information on this application starting right now, and until you ask me to stop. The decision as to whether you'll be able to ship the application will remain with you. In order to help you get that information, can I ask a few more questions?

[6:00:45 PM] Ben Simo: Of course it can be tested within a month. What information do you want from testing?

[6:01:00 PM] European Weekend Testers: @Michel yes go ahead please

[6:02:09 PM] European Weekend Testers: @Ben well I am not very familiar with testing, but we need to know that the new devices on the network are authenticated properly and this info is used properly by our own product

[6:04:06 PM] Ben Simo: @EWT who told you that's what you need to know? What are 'new devices'? what is 'the network'? what does 'authenticate properly' mean? what is 'this info'? what does 'used properly' mean? what is 'our own product'?

[6:05:20 PM] European Weekend Testers: [5:18 PM] European Weekend Testers:

<<< Radius protocol to get u started is used in telecom and to put it simple: it authenticates a new device on the network. So customer buys a smartphone, inserts SIM or whatever does to get it started and the device will be recognised by this protocol

[6:05:45 PM] Michael Bolton: Can you tell me about the sources of information for this product?

[6:05:55 PM] Michael Bolton: Who are the programmers? Can I talk to them?

[6:06:03 PM] Michael Bolton: Is there anyone else on the test team?

[6:06:09 PM] Michael Bolton: Has anyone else tested this?

[6:06:53 PM] European Weekend Testers: <http://freeradius.org/download.html> and the doc should be on their site. Couple of our devs gave it a try and they think it looks good

[6:07:26 PM] Ben Simo: I know that I can test anything in a month. However, I don't yet understand what I'm being asked to do. I've got all kinds of ideas as to how I can test server software. However, without further clarification of the mission and understanding of the context, I see little chance of satisfactory results (ie, useful information -- to people who matter) from testing.

[6:07:33 PM] European Weekend Testers: Yes you can talk with dev guys anytime they are available

[6:08:01 PM | Edited 6:09:05 PM] European Weekend Testers: We assume the current participants are all the members of the test team

[6:10:29 PM] European Weekend Testers: We have less than an hour, I need to know if I will talk to HR tomorrow to make papers for new people, more technical

[6:12:27 PM] Ben Simo: You need a decision as to whether or not, and how many, people we need to hire within an hour?

[6:12:29 PM] tonybruceuk: [16:45:24 BST] tonybruceuk: And if there is a option to hire somebody else to join the team then hell yeah, bring em on.

[6:13:38 PM] European Weekend Testers: we can do that, but that will not look good on you guys as we will hire more people with technical background in QA, and not looks for testers that are not familiar with these protocols

[6:14:59 PM] European Weekend Testers: I gave earlier some examples to make the decision of don't mind about hiring harder: the company pays above average, growing, you can recommond your friends, not so many other opportunities

[6:15:24 PM] Ben Simo: If we have good testers, they can learn the technology. learning is an essential testing skill.

[6:16:55 PM] Amy B: I would rather be known as someone who recommended a good hire than than someone who tried to do it all herself & failed (i& cost the company a lot of money...)

[6:17:07 PM] European Weekend Testers: so what do we need for that learning? Maybe John (a dev somehow familiar with that protocol) can have a tutorial next week. Will that help?

[6:17:20 PM] Ben Simo: if there is special domain expertise that is needed, we should be able to find that within the company. if we can't find one with that expertise available to us, hiring an advisor/consultant with domain knowledge to help teach testers should not cause any of our testers to look bad.

[6:18:22 PM] European Weekend Testers: We don't have an expert on that field that has complete knowledge, but it would be great if one of the testers will become specialists in it

[6:19:24 PM] Michael Bolton: So, to save time and typing, you can assume that I'll ask the context questions ("project environment") here: <http://www.satisfice.com/tools/satisfice-tsm-4p.pdf>

[6:20:39 PM] European Weekend Testers: Do we need more hardware then? How much?

[6:21:04 PM] Michael Bolton: I believe that within a month, I can master the information required to be helpful, assuming that I can collaborate with the others on the team.

[6:21:22 PM] Ben Simo: Note: throughout my career, i've depended on domain experts to help me get started in learning new tech. today, the web is a great learning tool for getting started. (Wasn't avail when i started testing) some things that were totally new to me when i stated testing them (or leading testing for them): digital radio communications, fax machine protocols, telephone trunk encryption systems, drug dosing (hired a pharmacist to help), HTTP (yeah, http was once a new tech few knew) ...

[6:21:42 PM] Michael Bolton: You seem to be in a big hurry for answers. Answering them too quickly, without a little research, increases the odds that I'll give you a bad answer.

[6:22:02 PM] European Weekend Testers: @Michael, Yeah the devs should be helpful in assisting you. However is a new field even for them and they do not require too much knowledge in implementing it at our needs

[6:22:13 PM] Ben Simo: what michael said!

[6:22:27 PM] Michael Bolton: How do you reconcile your first sentence with your second?

[6:23:09 PM] tonybruceuk: How much hardware? As much as we can get with the budget.

[6:23:15 PM] European Weekend Testers: So if you work extra time to get the needed knowledge - and get payed for it double the normally rate- would that be fine?

[6:23:35 PM] Michael Bolton: In fact, how do you reconcile the second half of your second sentence with the first half of your second sentence?

[6:24:01 PM] European Weekend Testers: @Michael They will be well intended in the help part, but they might lack some info

[6:24:23 PM] European Weekend Testers: for example they will not be able to think the problems that might occur on high load

[6:24:37 PM] Michael Bolton: If you're proposing overtime from the outset, I'm concerned about your management style.

[6:24:42 PM] tonybruceuk: I'm so lost, now we're discussing pay rates?

[6:25:12 PM] European Weekend Testers: Well we need the project done in next month, otherwise we might loose our client

[6:25:20 PM] Michael Bolton: (That's something I would think to myself, not necessarily say out loud.)

[6:25:31 PM] European Weekend Testers: And the payments were like a motivation

[6:25:51 PM] European Weekend Testers: ...for eventual extra time

[6:26:11 PM] Ben Simo: @EWT, may i talk to the client? or better yet, can we go talk to the client together? let's find out what is really needed to keep the client happy -- and keep the client

[6:27:09 PM] European Weekend Testers: We have multiple clients. You cannot talk directly to the client, but you can use Malcolm to get requests and answers from them. He is our contact guy

[6:27:24 PM] European Weekend Testers: he is a little bit technical

[6:28:48 PM] Ben Simo: @EWT, but you said we'll lose the client if we don't deliver in a month. which client will we lose? only one? what's i matter if we lose one client when we have many? is there greater risk in rushing to satisfy one client that might cause us to lose more, or more important, clients?

[6:28:55 PM] Michael Bolton: Needing the project done in a month sounds like an important problem for you.

[6:29:34 PM] European Weekend Testers: our clients came from the same refferal and one unsatisfied client can affect others

[6:29:43 PM] Ben Simo: Who said this needs to be completed in a month?

[6:30:20 PM] European Weekend Testers: We have 6 six weeks but we need to make additional documentation and validation into process

[6:30:34 PM] European Weekend Testers: so for testing we cannot go more

[6:31:10 PM] Michael Bolton: Is this your first time as a manager of a software project?

[6:31:46 PM] European Weekend Testers: I worked before as a manager for 3 years in a little diffent company

[6:32:08 PM] European Weekend Testers: but in this startup I see now I need to increase my skills in other direction also

[6:33:02 PM] Ben Simo: done. i tested it. it doesn't work. we'll deliver a detailed report in 30 days.

[6:33:08 PM] Michael Bolton: Heh.

[6:34:07 PM] European Weekend Testers: well guys, i cannot joke on this unfortunaltely. that doesn't seem a valid answer. what it doesn't work?

[6:34:14 PM] European Weekend Testers: is it our implementation?

[6:34:22 PM] European Weekend Testers: do we need another radius server?

[6:34:32 PM] tonybruceuk: Why would you not be writing documentation and validation (explain validation please) at the same time as you are testing?

[6:35:01 PM | Edited 6:35:06 PM] Michael Bolton: Here's what I would say. "I will happily provide you with all the information I can deliver within 30 days. Whether the product is ready to ship or not at that time is a decision for you to make. I'll keep you updated as often as you like with what I've found out about the product, and in particular with any problems that I discover. So, in answer to your original question, Yes, I can /test/ this in 30 days. Whether the programmers can /fix/ it in 30 days, and whether you'll want to ship it in 30 days is not something that I can answer at this time."

[6:36:50 PM | Edited 6:37:12 PM] Michael Bolton: In answer to your question about the additional hardware, I don't know. I will give you an answer on that as soon as I can, perhaps by the end of the day tomorrow, and at longest by Friday. But wasting your time with an answer now, when I don't know the answer, is not a service that I offer.

[6:38:23 PM] Ben Simo: I like Michael's response. I'd say something similar. However, I'm concerned about the 30 day requirement before we understand much of anything. If the date is so important, I want to know why.

[6:38:31 PM] Michael Bolton: In answer to Tony, documentation is (often) a physical thing, and paper is delivered in quantities such as truckloads or boxcars.

[6:39:11 PM | Edited 6:40:23 PM] European Weekend Testers: Ok, cool. What do you think about the mission and how would you reformulate to be more relevant to the idea shown today? (I mean the mission of today)

[6:40:36 PM] tonybruceuk: @Michael, confused, not sure what you are responding to?

[6:42:35 PM] Michael Bolton: You can be writing documentation at the same time as you're testing, certainly. However, printing the documentation requires a commitment to when it's going to be done, because printers don't like having a bunch of paper waiting around in the warehouse. In other words, to some degree, we're tied to the printers' schedules. Rescheduling their work means missing the schedule on ours.

[6:42:54 PM] tonybruceuk: Ahhhh, ok.

[6:43:25 PM] Michael Bolton: Ye learnz this stuffs when you've been a program manager. ;)

[6:43:31 PM] tonybruceuk: We've lost the facilitator, I'm not actually sure who it was today.

[6:43:59 PM] Michael Bolton: Sebi.

[6:44:54 PM] tonybruceuk: @Michael, got a convo going on with a guy trying to get the team changed from 'QA' to 'Test', could use your input if you have a few minutes?

[6:45:28 PM] Michael Bolton: Since it's just us, I'm afraid I have to bail. I'd have to say that the mission was a little misconceived--although if it fostered some learning about poorly framed missions, that's good.

[6:45:32 PM] Michael Bolton: @tony yes.

[6:45:37 PM] Michael Bolton: Just a few.

[6:46:46 PM] Ben Simo: yes, the mission wasn't clear

[6:47:41 PM] tonybruceuk: Must admit, bit confused myself, seemed to be jumping on differentissues? That the right word in this context?

[6:48:54 PM] Amy B: Today's session was perfect for me because I feel like I struggle regularly

with unclear missions. Seeing others who are further down the road than me take a crack at clarifying was very helpful.

[6:48:58 PM] Michael Bolton: The first thing to do is to make sure that the mission is clear and consensual.

[6:49:11 PM] Ben Simo: however, such mission confusion happens in real life too. sometimes it is necessary to stop, back up the train, and clarify mission and roles

[6:49:33 PM] Michael Bolton: Often the lack of clarity is in the head of the person giving the mission. That's *contagious*.

[6:49:49 PM] Ben Simo: yes, contagious. thus, i like to also talk to those giving the mission giver their mission

[6:51:04 PM] Ben Simo: in my experience, routing information through a middle-man (often a test manager) leads to great confusion, false urgency, and disappointment in the end

[6:51:35 PM] European Weekend Testers: sorry guys got disconnected

[6:51:51 PM] Ben Simo: and by 'test manager' here, i refer to a manager of testers, not a manager of a testing effort

[6:51:59 PM] tonybruceuk: WB

[6:54:00 PM] European Weekend Testers: so anyone more able to give a more better mission instead of one from today in order to trigger the same idea during an assignment of a project?

[6:54:39 PM] tonybruceuk: @Sebi, we were saying we were a bit confused by the mission but also we should have or at least I should have asked more questions.

[6:54:53 PM] European Weekend Testers: actually i got disconnected because I had a VM that created a new network that messed stuff up.. ((whew))

[6:55:00 PM] Michael Bolton: In a way, it's a good mission to give for a session like this, because it's much like the missions we often get. In which case, the meta-mission is to /clarify the mission/.

[6:55:52 PM] European Weekend Testers: yeah exactly, I think everyone gets projects like this and just go along without having any practice in dealing with these first steps

[6:56:53 PM] Ben Simo: Ask lots of clarifying questions. Including "am i asking too many questions?" and "is there someone else we should include in the discussion?"

[6:57:26 PM] European Weekend Testers: How about if too many questions will bother someone?

[6:57:42 PM | Edited 6:57:59 PM] European Weekend Testers: This mission had a product that has a lot of online doc

[6:58:09 PM] Michael Bolton: If asking too many questions will bother someone, I'm prepared to stop--but not before I address the issue that not asking questions will likely lead to not being clear on the answers.

[6:58:35 PM] Ben Simo: i've often seen these mission-clarifying discussions drag on without inviting the people who have the knowledge needed to clarify understanding of the mission.

[6:59:30 PM] Michael Bolton: And as for Ben's second question, sometimes I'll skip it, and ask "Can we get that person here?"--since the answer is almost always Yes. :)

[6:59:33 PM] Amy B: I will usually try to read the online doc before going into a Q&A, as a courtesy, but the online docs usually aren't so great at answering "what problem are we trying to solve here?"

[7:00:01 PM] Ben Simo: when people are annoyed by my questions, it hints that they may not

be the right person to answer them. i find it often useful to ask questions, then go do some research, and then return with more questions

[7:00:23 PM | Edited 7:00:25 PM] Michael Bolton: @Ben +1

[7:01:24 PM] European Weekend Testers: Ok, guys. I think we are about our end of the time for today. Anyone wants to add something else?

[7:01:40 PM] Michael Bolton: A fond goodbye. Cheers.

[7:01:51 PM] tonybruceuk: Thank you Sebi for facilitating.

[7:01:55 PM] Ben Simo: cheers.

[7:01:57 PM] European Weekend Testers: Thanks a lot Michael!

[7:02:03 PM] European Weekend Testers: Thanks guys

[7:02:09 PM] Amy B: Thanks everyone - good session for me.

[7:02:30 PM] tonybruceuk: Have a good Evening/Morning/Afternoon all.

[7:03:26 PM] European Weekend Testers: Nice weekend everyone!
