Weekend Testing WT74 – Kraftal.com

Table of Contents

Mission – As explained by faciliator Rasmus Koortis

The mission would be to test the online website building tool Edicy, using their test environment

http://signup.kraftal.com/

Since this is a big piece of software, testing should be focused on a subset of functionality.

The first challange is thus to find a feature or a set of features that you can test thoroughly within the limited time period.

I propose:

*The editor of a common webpage

*The form editor of a webpage

*The file upload and management functionality

*Creating a blog

*Or anything else you can find that is a subset of the total functionality

Since the software is intended to be easy to use, keep an eye out for any situation that might confuse a

non-technical user. Otherwise, use any testing technique that seems appropriate.

At the end of the testing session, provide your observations and issues in the form of a test report.

Take a few minutes to familiarize yourself with the tool, then select what you want to test. Be sure to explain what you are going to test on your test reports.
URL to page created:

Http://1233.kraftal

Test plan over view

• 10 min AD-hoc testing to be see what the product does

• 10 min planing

• 30 min exploratory testing based on planing

• 10 min to fill this report and/or be spread over other areas

Issues found

Chrome – Bottom menu bar is partly hidden when hovering a link and when page is loading

When opening webpages in Chrome a small area is displayed isntead of a status bar when loading. This bar is also displayed when hovering a link.

The bar is rendered over content on webpages and in this case over the bottom menu (see image).

If the page takes long to load it will take equally long time to see the bottom menu, make the user frustated.

Comments only supports ~65535 characters

Copied in a string with 100000 characters. The string was choped of so character 65535-100000 disapeard. There was no warning or information on upper limit and the content just disapeard with out no warning.

(tested on Chrome,17.0.963.78 m)

No row break if comment contains lots of text without spaces

On the "normal" page (not comments) long words will be rowbreaked even if there are no spaces

Post title only one row in edit mode, while severeal in preview/real mode

Edit mode:

Normal mode:

Consequence: The page does not look the same for the editor and the visitor

No warning when entering a incorrect email

When posting a coment and inserting an incorect email no warning is shown and the post is posted either way.

Unclear warnings when missing info in posting comments

65373 65379 65385 65391 65397 65403 65409 65415 65421 65427 65433
65439 65445 65451 65457 65463 65469 65475 65481 65487 65493
65499 65505 65511 65517 65523 65529 65535

The warnings displayed when not entering anythiong in some fields are shown as normal text is therefore very easy to miss.

You also have to scrolled all the way down past all the other comments to see the error message.

Tools used

Perl Clip

I used Perl Clip to create long string
