

- **(Chrome) Pupup dialog scrolling issue** -> **“Customizing the injected content - examples”** -> Live demo link opens up a dialog on desktop browser which scrolls together with main page scroll -> very irritating

- **Incorrect generator formatting regardless of browser (Chrome and emulator)**

## Easy Attribute generator

Ok, so you would rather just click a few buttons and have the attribute string generated for you? No problem. Just pick and choose below, and you will have the appropriate attribute generated instantly.

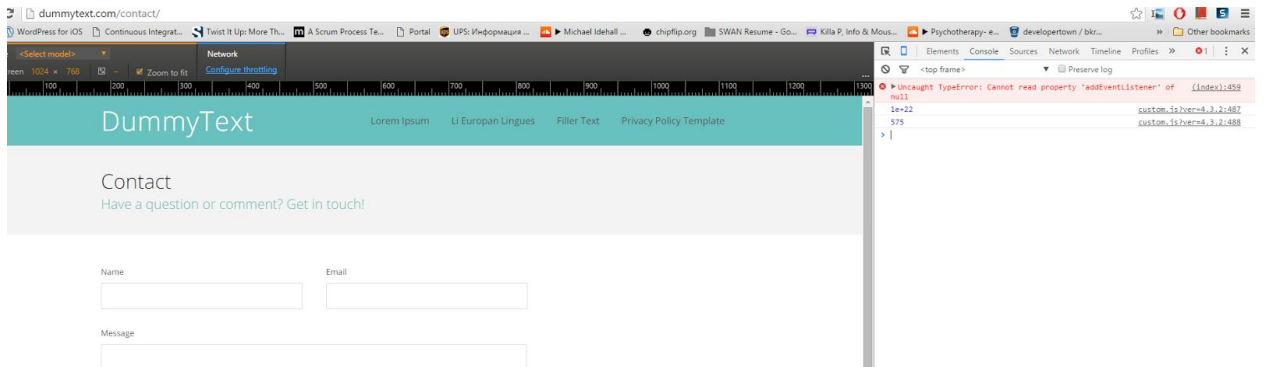

Tag name	Item count	Word count	Sentence length	Variation %
<input type="text" value="P"/>	<input type="text" value="3"/>	<input type="text" value="50 words"/>	<input type="text" value="10 words"/>	<input type="text" value="0 %"/>

```
<div data-dummytext='p-x3' >></div>
```

Click the attribute above to select it for easy copy-and-paste.

- **Javascript error while accessing Contact form**

- **Contact form does not persist data after failed validation**

**There were errors in the form.**  
Please try again.

What is 5 - 1?

Send Message

- **Contact form -> email validation does not work properly -> on front end it thinks that name@domain is a valid email (red label disappears) but after submit it rejects (obviously)**
- **Capture is static always 5-1**
- **Usage-How to section does not have proper html convention**

## Responsive design is not consistent for mobile browsers

### Easy Attribute generator

Ok, so you would rather just click a few buttons and have the attribute string generated for you? No problem. Just pick and choose below, and you will have the appropriate attribute generated instantly.

Tag name	Item count	Word count	Sentence length
<input type="text" value="p"/>	<input type="text" value="3"/>	<input type="text" value="50 words"/>	<input type="text" value="10 words"/>

```
<div data-dummytext='p-x3'></div>
```

Click the attribute above to select it for easy copy-and-paste.

How to Delete Dummy Text

to fill with dummy content. This basic example will  
placeholder text into a <p>-tag:

```
<p data-  
dummytext=""></p>
```

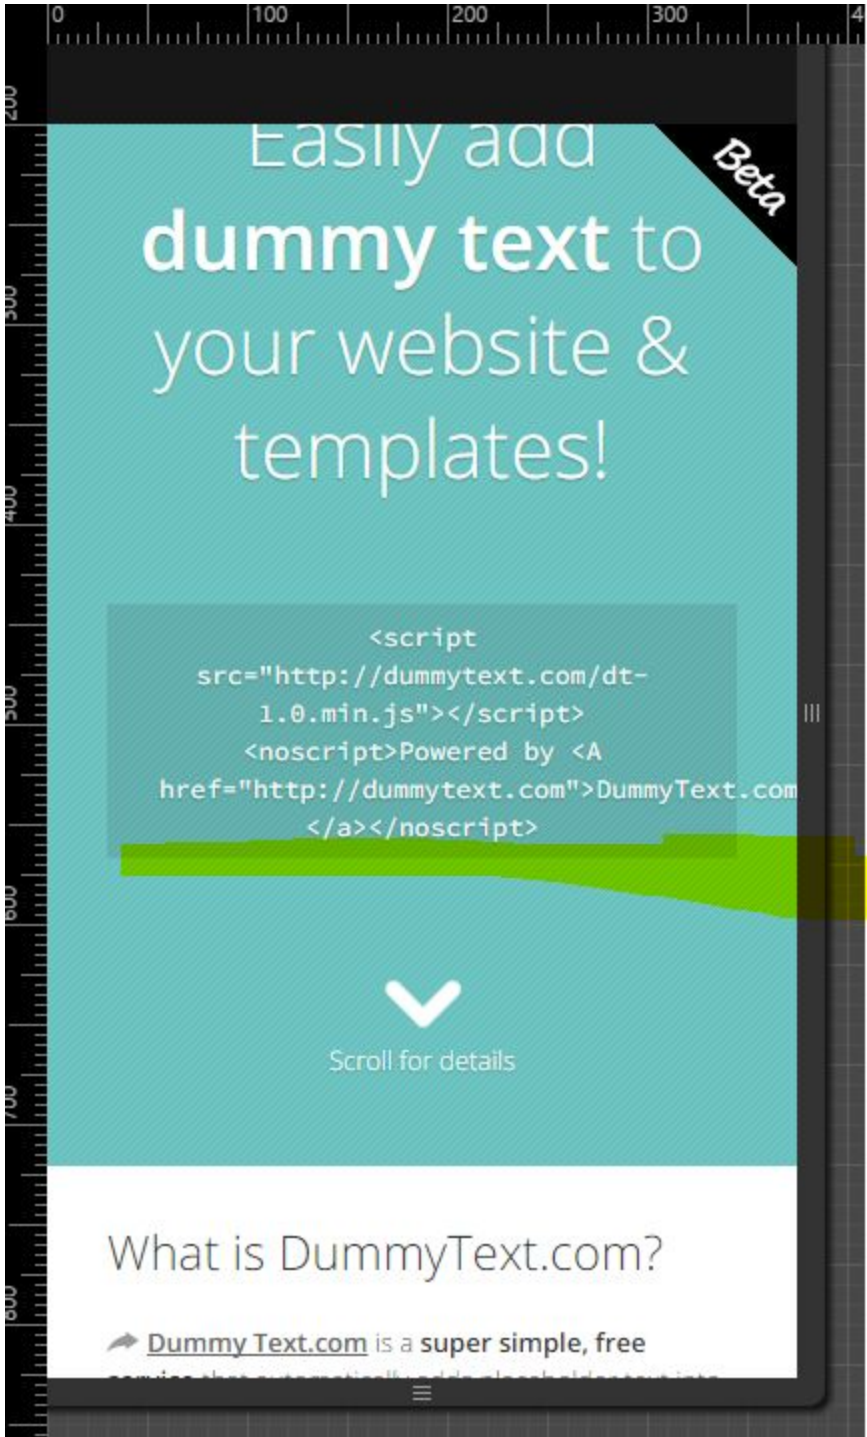

Finally, at the bottom of your page, just before your  
closing </body>-tag, add this single line of code:

```
<script  
src="http://dummytext.com/dt-  
1.0.min.js">  
</script>  
<noscript>Powered by  
<A  
href="http://dummytext.com">DummyText.com  
</a></noscript>
```

After your page loads as usual, the injected JavaScript  
will parse your HTML markup and fill in content where  
and how you have specified using the data-  
dummytext attributes. **Simple as that!**

## Customizing the injected content - examples

The **data-dummytext** attribute accepts a fairly

Easily add  
**dummy text** to  
your website &  
templates!
